

ABSTRACT OF THE DISCLOSURE

In a pickup device 1, a rising mirror 11 is composed in such a manner that two mirrors (first and second mirrors) are respectively provided on both sides of a substantially parallel transparent substrate 11A. A dichroic mirror 11B (first mirror) formed on one face (surface) reflects a blue laser beam and transmits a red laser beam. A hologram mirror 11C (second mirror) provided on the other face (reverse face) reflects a red laser beam.
